1. About Neria

Neria — Luxury Email Suite is a premium PrestaShop module that completely replaces the platform's native email system with a unified, elegant, multilingual rendering engine, enriched with 88 features spanning behavioural automation to advanced analytical intelligence.

It is designed for high-end product shops — jewellery, leather goods, fashion, fine craftsmanship, interiors — for which every email is an act of brand communication, not merely a system notification.

1.1 Compatibility

- PrestaShop 8.x (tested up to 8.2) and PrestaShop 9.x (tested up to 9.0.2 on the new Hummingbird interface).
- PHP 7.4 minimum, PHP 8.1+ recommended. Required extensions: OpenSSL, cURL, GD or Imagick, mbstring, json.
- Compatible with single-store and multi-store setups. All features are isolated per store.
- Mail server: any SMTP-compatible server (native PrestaShop). Neria does not send emails itself — it styles and enriches them.

1.2 What Neria does automatically

Upon activation, Neria intercepts via the `actionEmailSendBefore` hook every email sent by PrestaShop or any other installed module. It identifies the template, resolves the recipient's actual language, applies the brand design (colours, logo, typography), injects enrichment variables (tracking, A/B, loyalty, social...), and forwards the enriched email to PrestaShop's native sending mechanism. No additional configuration is needed for standard transactional emails to immediately benefit from the new design.

1.3 External network calls

Neria makes a single external network call to its own licence server (neriasoftware.com), at most once every 24 hours, to verify the validity of the key. Data transmitted: licence key, domain name, module version. No personal customer data is transmitted. If the server is unavailable, the last cached verification remains valid indefinitely — email delivery is never interrupted by a publisher-side outage.

2. Technical requirements

2.1 Server environment

- PHP: 7.4 minimum (8.1+ recommended for JSON performance)
- OpenSSL extension: required for AES-256-GCM encryption of sensitive data in the database
- cURL extension: required for API calls (licence, Gmail Postmaster, Google Search Console, PageSpeed, DeepL, Semrush, Moz)
- GD or Imagick extension: required for handwritten signature generation (SignatureGenerator)
- mbstring extension: required for multilingual string processing (Arabic, Japanese, Korean, Chinese)
- json extension: standard, included in all modern PHP installations
- MySQL 5.7+ or MariaDB 10.3+: 38 tables created at installation (neria_ prefix)

2.2 PrestaShop hooks used

- actionEmailSendBefore — intercepts all outgoing emails
- actionMailAlterMessageBeforeSend — adds List-Unsubscribe RFC 8058 header
- actionObjectOrderAddAfter — post-order trigger (attribution, loyalty, milestones)
- actionOrderStatusPostUpdate — order status tracking (shipped, delivered, refunded, returned)
- actionObjectOrderSlipAddAfter — refund trigger
- actionObjectOrderReturnAddAfter — merchandise return trigger
- actionUpdateQuantity — restock detection (waitlist)
- actionDeleteGDPRCustomer — customer data purge on GDPR request
- displayAdminOrderMainBottom — certificate block on order detail page
- displayCustomerAccount — email history on customer record
- displayHeader — behavioural cron fallback if no server cron is configured

2.3 SQL tables created

38 tables are created at installation, all prefixed with the store prefix followed by neria_:

- neria_stat: tracking events (sends, opens, clicks, conversions)
- neria_translation / neria_translation_history: localised text for all templates (19 languages) and the change history
- neria_abtest / neria_abtest_translation / neria_abtest_history: A/B test definitions, variant text, and history of completed tests
- neria_loyalty_points / neria_loyalty_rewards: loyalty point totals and rewards for the loyalty programme
- neria_waitlist: waitlist registrations per product
- neria_customer_segment: behavioural segmentation per customer
- neria_churn_score: churn risk score per customer
- neria_propensity_score: purchase propensity score
- neria_attribution: 24h last-click tracking for revenue attribution

- `neria_upsell`: post-purchase upsell suggestions sent
- `neria_webhook_queue`: outgoing webhook delivery queue
- `neria_bounces`: invalid email addresses (hard bounce / soft bounce)
- `neria_log`: internal Watchdog log (INFO/WARNING/ERROR events)
- `neria_collection` / `neria_collection_sent`: collection completion rules and send deduplication
- `neria_look_rule` / `neria_look_sent`: 'Complete your look' rules and send deduplication
- `neria_seasonal_campaign`: recurring seasonal campaigns
- `neria_queue`: deferred send queue at customer's preferred time
- `neria_certificate`: register of issued authenticity certificates
- `neria_quote`: B2B quote reminders
- `neria_reconciliation`: reconciliation of partial/multi-stage refunds
- `neria_product_lifespan`: product lifespan reminders
- `neria_preferences`: customer preference centre (opt-in/out by category)
- `neria_voice_profile`: voice fingerprint (banned/preferred words, tone notes)
- `neria_birthday_voucher` / `neria_milestone_voucher`: birthday and order-milestone discount vouchers
- `neria_behavioral_sent`: deduplication of behavioural emails already sent
- `neria_blacklist`: disabled templates (native PrestaShop rendering resumed)
- `neria_config` / `neria_custom_variable` / `neria_signature` / `neria_cron_health` / `neria_calendar_event`: configuration, custom variables, handwritten signature, cron health tracking, and calendar occasions

3. Installation

3.1 From PrestaShop Addons (recommended)

1. In the PrestaShop back office, go to Modules → Module Catalogue.
2. Search for 'Neria' in the search bar.
3. Click Buy, then once the purchase is confirmed, click Install. Installation proceeds automatically.
4. Once complete, the Neria module appears in the left sidebar menu.

3.2 Manual installation (zip file)

1. Download the neria-X.Y.Z.zip file from your customer account or purchase confirmation email. Save it to your desktop.

2. In Modules → Module Catalogue, click Upload a module in the top right corner.

3. The upload window opens. Click Select a file or drag and drop the zip directly into the upload area.

4. In the file browser, select the neria-X.Y.Z.zip file and click Open.

5. PrestaShop imports and installs the module. The 'Module installed!' confirmation message appears.

6. The Neria menu appears immediately in the left sidebar of the back office.

3.3 What installation creates

Installation does not modify any existing data. It creates only:

- 38 dedicated tables (neria_ prefix) for statistics, loyalty, certificates, etc.
- Translations for all 117 templates in 19 languages, loaded into the database.
- Default settings for all features — all enabled, except A/B tests and the loyalty voucher tier, which are disabled by default as a precaution.

Note — From the moment of installation, all standard PrestaShop emails (order confirmation, password reset, newsletter...) are automatically styled with Neria's default design. No configuration is required for this initial rendering.

4. Licence activation

Neria requires a valid licence key, linked to your store's domain name, to function beyond the 30-day grace period after installation.

4.1 Activating your key

1. Open the Neria menu → any tab. If no licence is active, an orange banner appears at the top of the screen.
2. Enter your licence key in the format NERIA-XXXX-XXXX-XXXX, provided by email upon purchase on PrestaShop Addons.
3. Click Activate. The key is verified online and linked to your domain.

4.2 Domain change

If you migrate to a new domain name, reuse the same key. Neria detects the change and sends a confirmation email to your purchase address. The confirmation link transfers the licence to the new domain. This mechanism is limited to two transfers per year.

4.3 Fault tolerance

If the licence verification server is temporarily unavailable, the module retains the last known status in cache and continues sending emails normally. No service interruption can result from a publisher-side outage.

5. Back-office overview

The Neria menu groups all features within a structured sidebar navigation. Here is a brief overview of each available tab.

5.1 Tab list

- Home — Dashboard, 30-day KPIs, upcoming calendar occasions, general configuration
- Design — Colours, logo, dark mode, container width, quick styles, live preview
- Typography — Fonts per language and script family (Latin, Arabic, Japanese, Korean, Chinese)
- Translations — Edit text for all templates in 19 languages, DeepL, CSV export/import
- Social media — Configure social links injected into every email footer
- Statistics — KPIs, tracking, attribution, segmentation, churn score, CLV, deliverability
- A/B Tests — Create and monitor template tests
- Manual send — On-demand send to a customer, scheduled delivery
- Multi-client preview — Simulate rendering in Gmail, Outlook, Apple Mail, Orange, Yahoo
- Customer history — Emails received per customer, timeline, alerts, CSV export
- Calendar — Automatic calendar occasions (25 occasions, 19 languages)
- Webhooks — Outgoing notifications to CRM, Zapier, Make
- Segments — 5 behavioural customer segment dashboard
- Seasonal campaigns — Custom recurring campaigns
- Bounces — Management of invalid email addresses (IMAP + ESP webhook)
- GDPR — Compliance audit and personal data erasure
- Academy — Tutorials and guides integrated directly in the back office
- Certificates — Configuration and issuance of PDF authenticity certificates
- Control centre — Feature visibility in the menu
- Help — Watchdog log, full diagnostics, cron token

6. Home tab — General configuration

The Home tab is Neria's main dashboard. It brings together 30-day KPIs, upcoming calendar occasions, and the module's general settings.

6.1 30-day KPIs

At the top of the tab, four key indicators are displayed: emails sent, open rate, click rate, and active languages out of 19. These figures give a quick snapshot of overall sending health.

6.2 Automatic language detection

Neria selects the language for each email based on the customer: their explicit choice if they selected a language, otherwise the country of their delivery address. A customer from abroad will therefore receive the email in their own language, even if the store is configured in a single language.

Language	Good morning	Good afternoon	Good evening	Salvo
IT	Buongiorno	Buon pomeriggio	Buonasera	Salvo
ES	Buenos días	Buenas tardes	Buenas noches	Noche
PT	Bom dia	Bom tarde	Bom noite	Clã

NO	God morgen	God dag	God kveld	PM
DA	God morgen	God dag	God aften	PM
NL	Goedemorgen	Goedemiddag	Goedeavond	hallo

6.3 Smart Salutation — Local time

Neria automatically injects the correct greeting based on the customer's local time (derived from their delivery address). No template editing required — simply customise the greetings below by language and time slot.

SMART FALLBACKS — MISSING FIRST NAME

If a customer signed up without a first name, Neria automatically replaces **{first_name}** with the elegant word you define here, based on the result language. Leave a field empty to keep the default value.

Language	Smart Fallback
FRANCAIS (FR)	Cher Initia
PORTUGUES (BR)	Prezado Cliente
CHINESE (CN)	尊敬的客户

DISCOUNT VOUCHERS

Validity period — shared by all vouchers
Automatically applies to every email containing a voucher: birthday, anniversary, manual vouchers and the end of your gift. One setting covers all five.

Validity period shown in voucher email (variable {validity_days}). Adjust it to match your policy.

VALIDITY PERIOD (DAYS)

30

BIRTHDAY DISCOUNT ("BIRTHDAY" EMAIL ONLY)
Amount of the discount voucher automatically offered on the customer's birthday (variable {voucher_code}).

BIRTHDAY DISCOUNT AMOUNT **DISCOUNT TYPE**

10 Percentage (%)

ORDER MILESTONE DISCOUNT ("MILESTONE_ORDER" EMAIL ONLY)
Enables an automatic discount voucher when a customer reaches an order milestone (gift, 10th, 25th, 50th, 100th). Disabled by default — independent of the points-based Loyalty Programme.

How does it work?
When a customer reaches an order milestone, a mail discount voucher is automatically generated and included in the congratulatory email.

Independent of the Loyalty Programme
This voucher is optional and requests from the points-based Loyalty Programme — you can enable either one, both, or neither.

6.4 General settings

- Custom variables: the merchant can define their own variables ({shop_instagram}, {shop_hashtag}, etc.) injected into all templates.
- Multi-sender: configure different Sender Name/Email pairs per language or per template.

- Silent witness (BCC): sends a blind copy of every email to an archive address.
- Carbon footprint: displays a note in email footers with a link to your offset page.

SAVE

SILENCE MODE Inactive - Enable

Blocks duplicates of the same email you already sent to this customer recently; the second send is cancelled. Prevents accidents (double-click, PS bug) without altering normal behavior.

Duplicate prevention
Prevents the same customer from receiving two identical emails a few minutes apart – especially during rapid multiple orders.

Silence window
During the configured delay (e.g. 10 min), any email of the same type to the same customer is blocked. After this delay, sending resumes normally.

Deliverability impact
Reducing duplicates improves your reputation score and lowers the risk of your emails being flagged as spam.

PROTECTION WINDOW

10 minutes

Duration during which a second send of the same template to the same customer is blocked (5-45 min). Recommended: 10 min.

SAVE

Daily SMTP quota

Some hosts impose a daily email limit (OVH, Ionos, etc.). If you exceed this quota, subsequent emails are **silently rejected** – no visible error, so because they simply vanish. By entering your limit here, Watchdog will alert you at 80% of the quota as you can act before sending stops.

How to find your quota?
Check your hosting account (Email or SMTP section) or contact their support. Common limits: OVH Starter = 200/day • cccwhk = 200/day • Ionos = 200/day • Infomaniak = unlimited. Leave 0 if your host imposes no limit.

PER-LANGUAGE SENDER

Set a distinct sender name and email for each customer language. If a field is empty, Neria uses the store's default sender. Make sure each email address is authorized in your SPF/DKIM configuration.

Active - Disable

WHY USE THIS FEATURE?

A Japanese customer receiving an email from contact@yourshop.fr will treat it less than one from Japan@yourshop.jp. Neria sender lets you adapt the sender identity to the recipient's language, without touching your main email configuration.

DELIVERABILITY

A localized sender name improves open rates - opens filter less emails whose name the recipient recognizes.

TRUST

An Arabic-speaking customer sees "Japan" rather than "Station Dupont" in their inbox. Adapting the name strengthens your brand's local identity.

HOW IT WORKS

Neria detects the email's language and automatically substitutes the sender name and address. Leave a field empty = default shop sender.

Before using a new sender address, make sure your domain is correctly configured (SPF, DKIM, DMARC) ... View our domain configuration advice

7. Design tab — Visual identity

The Design tab configures the visual styling of all emails sent by the store. Any change is immediately reflected across all templates via the live preview.

7.1 Colours

- Accent colour: used for CTA buttons, links, highlighted amounts, promo codes.
- Background colour: general email background (excluding the central card, which is always white for readability).
- Primary and secondary text colour.

1. Click the desired colour picker.
2. Choose via the graphical palette or enter the hexadecimal code (#B38B59 for Neria bronze, for example).
3. The live preview updates immediately. Click Save.

7.2 Logo

1. Click the logo upload button.
2. Select your logo file (transparent PNG recommended, minimum 300×100 px).
3. The logo appears in the preview at the top of each email. Adjust the display width if needed.

7.3 Dark mode

Dark mode locks the rendering in light theme even if the recipient's email client automatically applies a dark theme (meta-color-scheme forced to light). Recommended for stores with a logo or brand colours sensitive to colour inversion.

7.4 Container width

The width of the email's central card is adjustable between 480 px and 700 px. Recommended value: 600 px (industry email standard).

7.5 Quick styles — One-click presets

Six presets instantly apply a cohesive combination of colours and fonts:

- Golden elegance — gold/cream tones, discreet serif
- Black & white minimalism — modern sans-serif
- Navy blue & gold — premium nautical style
- Bordeaux & ivory — winery, leather goods style
- Forest green & bronze — natural craftsmanship
- Powder pink & grey — women's fashion

1. Click one of the 6 styles in the Quick styles section.
2. The live preview updates instantly.
3. Click Apply this style to confirm, or choose a different style.
4. The Factory reset button restores the original values at any time.

7.6 Handwritten signature

Neria can generate a calligraphic signature image from the name entered, using the GD library and handwritten fonts (Dancing Script, Great Vibes, Sacramento, Pinyon Script). This signature is inserted into the footer of each email, below the closing formula.

1. Enter the name to calligraph in the Signature name field.
2. Choose the font from the 4 available options.
3. Adjust the size and colour.

4. Click Generate preview, then Save.

8. Typography tab

The Typography tab configures the fonts used in emails, by script family. Neria handles 5 families: Latin, Arabic (RTL), Japanese, Korean, and Simplified/Traditional Chinese.

How it works
Neria automatically detects each recipient's language and applies the matching script's font (Latin, Arabic, Cyrillic, Japanese, Korean, Chinese). The Google Font is loaded automatically in the email. Outlook (which doesn't support web fonts) falls back to the system font shown in parentheses.

FONT SIZE
Body text size in emails (12–48pt).
14 pt

LINE HEIGHT
Vertical spacing between text lines (1.2–2.0).
1.4

HEADING WEIGHT
Applied to the main headings of emails.
☐ All Thin (new)
 ☒ All Normal (new)
 ☐ All Bold (new)

LATIN

Votre création est enregistrée

Nos artisans apprécient à vous l'offrir

Madame, Monsieur,

Nous avons le privilège de confirmer la réception de votre commande. Chaque pièce que vous avez distinguée sera préparée avec l'attention qui lui est due — et que vous méritez.

Nos artisans portent en eux un héritage transmis de génération en génération. Votre création en est devenue l'expression.

DÉTAILS DE VOTRE COMMANDE

Numéro de commande : NR-000123

Date : 29/07/2024

Méthode de paiement : Carte bancaire

RÉFÉRENCE	PRODUIT	PREX UNITAIRE	QUANTITÉ	TOTAL
NR-001	Mante Armante Edition Limited	189,00 €	1	189,00 €
NR-014	Boucle Carré Juché	79,00 €	1	79,00 €

9. Social media tab

This tab configures the social media icons and links automatically injected into the footer of every email. Up to 9 platforms available: Instagram, Facebook, Pinterest, TikTok, YouTube, LinkedIn, X/Twitter, Snapchat, WhatsApp.

The links you enter appear automatically in the footer of every email. Leave empty to hide.

HOW IT WORKS
The icons you enable here appear in the footer of all your Neria emails, in all 18 languages. They reinforce the credibility of a brand with an active presence – but a dead link or an abandoned account produces the opposite effect.
Only fill in the networks you actually keep up to date. Leave the other fields empty: the corresponding icon simply won't appear in your emails.

INSTAGRAM
https://instagram.com/votre_compte

PINTEREST
https://pinterest.com/votre_compte

FACEBOOK
https://facebook.com/votre_page

X (TWITTER)
https://x.com/votre_compte

YOUTUBE
https://youtube.com/@votre_chaine

TIKTOK
https://tiktok.com/@votre_compte

SAVE SOCIAL NETWORKS

1. Enter the full URL of your profile for each desired network (leave blank to hide that network).
2. Reorder icons by drag and drop if needed.
3. Click Save, then send yourself a test email to see how the icons render in the footer — the on-screen preview in the Preview tab does not display social icons.

Access before everyone else

Your loyalty privilege

Good evening, test,

In recognition of your loyalty, we are opening access to our new collection before its official release.

10. Translations tab — 19 languages

The Translations tab allows editing the text of each of the 117 email templates, in each of the 19 available languages (fr, en, de, it, es, pt, br, gb, ar, ja, ko, zh, tw, ru, tr, sv, no, da, nl), with a live preview before saving.

10.1 Editing a template

1. Select the language from the drop-down list at the top.
2. Choose the template to edit from the list (or use the global search).
3. Click Edit. The editor opens with the fields: Subject, HTML body, Plain text body.
4. Edit the text. Available variables ({firstname}, {order_reference}...) are listed on the right.
5. The live preview updates with each keystroke. Click Save.

10.2 DeepL automatic translation

1. In the editor, click the Translate with DeepL button.
2. Neria sends the source text to the DeepL API and automatically fills in the target field.
3. Review and adapt if necessary before saving.

Note — A DeepL Free API key (500,000 characters/month free) must be configured in the Home tab → General settings → DeepL API key.

10.3 CSV export and import

1. Click Export CSV to download all translations for a language.
2. Edit the CSV file in Excel or Google Sheets (column A: key, column B: translation).
3. Click Import CSV and select the modified file. Translations are updated in bulk.

10.4 Blacklisting a template

If you want a specific template to be handled by PrestaShop's native system rather than by Neria (globally or for a given language), go to Home → Template Blacklist:

1. Select the template from the drop-down list.
2. Choose a specific language, or leave 'All languages' for a global block.
3. Click Add. PrestaShop then handles that email natively on Neria's behalf.
4. To re-enable it, remove the rule from the table of active rules.

TEMPLATE BLACKLIST

Disable theme rendering for a given template, for all languages or a specific one. Prestashop will then send the native email (or your third-party tool takes over).

TEMPLATE:
 LANGUAGE:

TEMPLATE	LANGUAGE	DATE
CART_CONFIGURATION	All languages	2025/01/20

10.5 Translation history

Every translation change is logged with a timestamp. The history is accessible via the History button in a template's editor.

11. Brand voice fingerprint

The voice fingerprint lets you define, per language, banned words, preferred words, and editorial tone notes. Neria automatically scans existing translations and flags inconsistencies, without relying on any external AI.

TEXT CUSTOMISATION
Freely edit the text of each email, language by language. Your changes are saved independently of module updates.

Neria is already translated into 18 languages — what is this tab for?
Yes, Neria ships every email ready to use. But those texts are generic: every shop using Neria receives the exact same wording. This tab lets you make your emails sound like your brand, not like a piece of software.

ADJUST THE TONE Replace "Dear customer" with "Dear Sir or Madam" or the customer's first name — depending on your brand positioning.	POLISH ONE LANGUAGE The default translation is correct, but your market may expect a different register.
EXTERNAL COPYWRITER Export the texts to CSV, have them rewritten by a professional, then import them back. Zero copy-pasting.	MULTI-STORE Export your texts from one shop and import them into the others in a few seconds.

HOW TO CUSTOMISE AN EMAIL?

1. Choose a template from the dropdown list (e.g. Order confirmation).
2. Select the language, then click Load.
3. Edit the texts and click Save. Your texts replace the Neria defaults and are not erased by updates.

⚠ The preview below the editor shows the quality of your subject line: optimal length, selected open words, score. You can also use to maximise open rates.

🔒 Your edits are protected: Neria updates some core texts from time to time, but they are always marked as **locked**, and can always be restored with one click.

GLOBAL SEARCH
Search text across all templates and languages.

TEMPLATE **LANGUAGE**
Bespoke ready en-France **LOAD** **PREVIEW** **REPAIR TRANSLATIONS**

DeepL Automatic translation
DeepL is a high-quality machine translation service — far superior to Google Translate for professional copy. It translates your Neria emails in seconds, into any of the 48 supported languages.

Free plan — 500,000 characters/month — enough for all your templates.
Free plan — 500,000 characters/month — enough for all your templates.
Your texts stay fully editable — DeepL pre-fills, you review and adjust.

How to get your free key: create an account on [deepl.com](https://www.deepl.com) — API section — copy your Free API key (it ends with `..X`) — paste it below.

SAVE Enter your DeepL API key to enable automatic translation.

EXPORT CSV **IN THIS LANGUAGE** **18 LANGUAGES** **IMPORT CSV** **IMPORT CSV** **TRANSLATE VIA DEEPL** **RESET** **THIS TEMPLATE (18 LANGUAGES)** **RESET ALL**

Brand voice fingerprint
Define the words your brand uses (or avoids) to spot additional inconsistencies in your translations — no artificial intelligence, just simple, transparent text search.

HOW IT WORKS
List your banned and preferred words below (one per line). Every time you save a translation, Neria alerts you if a banned word appears in the text. The "Check consistency" button scans all translations already saved for this language, not just the template currently displayed.

HOW TO USE IT

1. List your **banned words** — the ones your brand never uses (one per line).
2. List your **preferred words** — the ones that define your brand (one per line).
3. Tone notes (optional) — a free-text reminder of the intended feel, not automatically checked.
4. Click "Check consistency" to scan all translations already saved for this language, not just the template currently shown.

Tip: Start with 2 to 3 truly important words rather than a long list — easier to keep consistent, and every alert stays meaningful.

BANNED WORDS
shop

purchase

PREFERRED WORDS
emotion

1. In the Voice fingerprint section, select the language.
2. Enter Banned words (e.g. 'cheap', 'promo', 'sale') separated by commas.
3. Enter Preferred words (e.g. 'exclusive', 'artisan', 'bespoke').
4. Add Tone notes (e.g. 'formal address throughout', 'no exclamation marks').
5. Click Run retroactive audit to analyse all existing templates in that language.
6. Neria displays the list of templates containing banned words, with the surrounding context.

12. Manual send tab

The Manual send tab allows sending any email template to any customer, immediately or at a scheduled time, from the back office.

1. In the Customer field, start typing the recipient's name or email. Autocomplete suggests matching customers.
2. Select the template to send from the drop-down list.
3. If the template requires specific variables (order number, amount...), fill in the fields that appear.
4. Choose the sending language (default: customer's preferred language).
5. Optional: tick Schedule to define a deferred send date and time.
6. Click Preview to check the rendering, then click Send.

Note — Neria detects if an identical email has already been sent recently to the same customer and displays a potential duplicate warning before sending.

13. Multi-client preview tab

This tab simulates the rendering of any template in 10 different email clients: Apple Mail, Gmail, Outlook Desktop, Orange Mail, Yahoo Mail, Outlook Web (Hotmail/Live/MSN), QQ Mail, Mail.ru, Samsung Email, GMX/Web.de. CSS is inlined server-side for each simulated client — no data is transmitted externally.

1. Select the template to preview from the drop-down list.
2. Select the language.
3. Click Preview. The 10 renderings are displayed in a grid.
4. Click any rendering to enlarge it and scroll through the full email.

13.1 Simulate dark mode

The Simulate dark mode (all clients) button switches the display to dark theme to verify that the rendering remains readable and that brand colours do not invert in an undesirable way.

14. Behavioural automations

The  Automations tab brings together all 21 daily tasks triggered by Neria's behavioural cron. Each automation has its own ON/OFF toggle, a counter of emails sent today and in total, and a trigger indicator.

Automation	Trigger	Today	Total	Status
Customer birthday	On the customer's birthday	0	4	Inactive
1st order anniversary	1 year after the 1st order	0	2	Inactive
Relationship anniversary	Every year on the date of the 1st purchase	0	2	Active
Post purchase follow-up	30 days after last order	0	4	Inactive
Win back inactive customer	90 days without an order	0	3	Inactive
Loyalty reward expiry	7 days before voucher expiry	0	0	Inactive
Wishlist reminder	Wishlist item not purchased in 14 days	0	0	Inactive
Abandoned cart (3 delays)	At 1h, 3h, then 7h after cart abandonment	0	5	Inactive
Checkout abandonment	At 1h after checkout abandonment	0	2	Active
Post purchase care & review	7 days (sent) and 14 days (review) after delivery	0	4	Inactive
Shipping delay alert	7 days after shipping without delivery	0	0	Inactive
Ghost cart	Inactive cart 120 days, no recent order	0	2	Active
30h quote follow-up	Auto follow-ups D+3, D+7, D+14 after quote sent	0	0	Active
Refund reconciliation	After a refund is processed	0	0	Active
Long term loyalty	Based on daily calculated CLV tiers	0	0	Active
Collection completion	Missing piece in a defined collection	0	0	Active
Look completion	Missing item in a defined look	0	0	Active
Individual purchase window	Start at each customer's preferred time	0	0	Active
Purchase propensity score	Daily recalculation of purchase probability score per customer	—	—	Calculating
Behavioural segmentation	Daily recalculation of behavioural segments (Champion, Loyal, At risk...)	—	—	Calculating
Churn risk score	Daily recalculation of churn probability for each customer	—	—	Calculating

Note — The 'Force execution now' button immediately triggers all active crons for the current store. The last 3 rows (Propensity score, Segmentation, Churn score) do not send emails: they recalculate internal database scores and display ' calculating' instead of the send button.

14.1 Server cron configuration

To ensure daily execution, configure a cron task on your server. The authentication token is available in the Help tab → Cron configuration.

Note — On O2switch, add the task via cPanel → Cron Jobs. Recommended frequency: once a day at 08:00.

14.2 Customer birthdays

Three birthday emails are available, each with its own toggle:

- Customer birthday (birthday): sent on the customer's birthday, with a configurable discount voucher.
- First order anniversary (first_anniversary): sent exactly 1 year after the first order.

- Relationship anniversary (relationship_anniversary): sent each year on the date of the first purchase (2 years, 3 years...).

14.3 Abandoned basket — 3 waves

Three follow-up emails are sent automatically after a basket abandonment, with strict deduplication (a customer never receives two follow-ups for the same basket):

- Wave 1 — abandoned_cart_1: 1 hour after abandonment (gentle reminder).
- Wave 2 — abandoned_cart_2: 24 hours after abandonment (follow-up with optional incentive).
- Wave 3 — abandoned_cart_3: 72 hours after abandonment (last chance).

Note — If the customer completes their order between two waves, the subsequent waves are automatically cancelled.

14.4 Checkout abandonment

The checkout_abandonment email is triggered 1 hour after a customer has selected an address and carrier without proceeding to payment. An earlier signal than the classic abandoned basket.

14.5 Post-purchase follow-up

- Product care (post_purchase_care): sent 7 days after confirmed delivery. A care and maintenance advice email.
- Review request (post_purchase_review): sent 14 days after delivery. A review solicitation email with a direct link to the product page.

14.6 Reorder reminder

The reorder_reminder email is sent 30 days after the last order for products with recurring consumption (cosmetics, food, consumables). Can be filtered by product category.

14.7 Win-back

The win_back email is sent 90 days after the last order to inactive customers. Optionally includes a win-back discount voucher.

14.8 Shipping delay

The order_shipped_delay email is sent if an order marked as Shipped has received no delivery confirmation 7 days after dispatch. A proactive email informing the customer and suggesting they contact the carrier.

14.9 Ghost basket

The ghost_cart email targets baskets created more than N days ago (configurable) that never resulted in an order and were not covered by an abandoned basket follow-up. A quiet follow-up for customers who created a basket but were not active at the time of the standard cron run.

15. Order triggers

Order triggers are emails sent automatically in the background, with no configuration needed in the back office. They fire via PrestaShop hooks as soon as the corresponding event occurs in the store.

15.1 Order milestones (`milestone_order`)

A congratulatory email sent to the customer when they reach a symbolic milestone: their 5th, 10th, 25th, 50th, or 100th order. The message highlights the customer's loyalty and may include a discount voucher.

15.2 Order on hold

An informational email sent automatically when an order moves to a status configured as 'blocking' (e.g. awaiting supplementary payment, customs issue).

15.3 Partial shipment

If an order is shipped in multiple consignments, the `order_partial_shipped` email informs the customer of what is in the current parcel and what remains in preparation.

15.4 Refund processed

The `refund_processed` email is sent automatically upon the creation of a credit note. Three post-refund reconciliation follow-up emails (`refund_reconciliation_1/2/3`) are sent at D+1, D+3, D+7 to retain the customer despite the incident.

15.5 Return received

The `return_received` email is sent automatically upon physical receipt of the returned merchandise, confirming that the return is duly registered. No merchant action is required: the PrestaShop hook fires the send as soon as the return is created in the database.

Note — These triggers have no dedicated configuration interface. To verify that a send took place, check the email history of the relevant customer in the Customer history tab.

16. Calendar tab — Calendar occasions

Neria automatically sends emails for 25 recurring calendar occasions, in each customer's preferred language, with intelligent date resolution at 4 levels (merchant override, Hijri/lunar algorithm, pre-calculated dates 2025–2035, fixed dates).

Available occasions: Christmas, New Year, Valentine's Day, Mother's Day, Father's Day, Grandparents' Day, Halloween, Black Friday, Eid al-Fitr, Eid al-Adha, Ramadan (start), Diwali, Chinese/Lunar New Year, Hanukkah, Easter, May Day, International Women's Day, and more.

16.1 Enable / disable an occasion

- Find the occasion in the list.
- Click the Active/Inactive toggle. The occasion will (or will not) be sent at the next cron run.

16.2 Customise the date

- Click the Edit icon for the occasion.
- Tick Date override and enter the desired date (DD/MM format).
- Click Save. Your custom date takes priority over the automatic calculation.

17. Seasonal campaigns tab

Seasonal campaigns allow the merchant to create custom recurring sends — specific to their business — that fire automatically every year on the same date.

SEASONAL CAMPAIGNS

Set up your campaigns once – sales, Black Friday, Christmas, shop anniversary... Vorta automatically sends them every year to eligible customers, via the daily cron. No action is required on your part after configuration.

HOW IT WORKS

Every day, the Vorta cron compares today's date with your configured campaigns. If a campaign is scheduled for today (or in 30 days according to your delay), emails are automatically sent to eligible customers. Deduplication is **manual**: a customer never receives the same campaign twice in the same year.

INSTRUCTIONS

- Name** → an internal name to identify it in the list (not visible to the customer).
- Email template** → the design and content sent. Choose *special_offer* for a promotion, or enable *Gift Ideas Mode* for a "gift for someone" email.
- Annual date** → MM-DD format. Examples: 12-25 = Christmas; 11-29 = Black Friday; 03-25 = Mother's Day; 08-24 = Music Day.
- N days before** → schedule the email in advance: > one week before = 7; the day of
- Targeting** → refine by gender, age group, segment (Ambassador, Local...) and language. Everything checked = all eligible customers.
- Gift Ideas Mode** → an email with a "gift for someone" issue, reserved for the Ambassador + Loyalty segments, with a personalized product suggestion based on purchase history.

Tips: create one campaign per occasion → don't merge Christmas and Black Friday into the same campaign, you would lose the flexibility of targeting and timing.

CAMPAIGN NAME (shown in the admin only) Black Friday Christmas, Summer Sale... ANNUAL DATE (MM DD) 12-25 Eg: 11-25 = Nov 25 • 12-25 = Christmas • 01-04 = National Day AGE RANGE >= min <= max from 0 to 100 years	SEND N DAYS BEFORE 0 = the day of 3 = 3 days before TARGETED LANGUAGES none checked = all languages fr (France) en (English GB) de (Deutsch) it (Italiane) es (Español) pt (Portuguais PT) pt (Portuguais BR) en (English CHN) ca (Català) sl (SLO-2) pl (Polski) sv (SVE) nl (Dutch) ru (Russian) uk (Ukrainian) no (Norwegian) da (Danish) sv (Swedish)	EMAIL TEMPLATE will be sent to eligible customers -- Choose a template -- TARGET GENDER All (men + women)

ANNUAL CALENDAR

JANUARY	FEBRUARY	MARCH
APRIL	MAY	JUNE
JULY	AUGUST	SEPTEMBER
OCTOBER	NOVEMBER	DECEMBER

■ Active campaign · ■ Inactive campaign · D-31 = send 31 days before the date · The daily cron triggers automatically.

Note — A seasonal campaign can only be sent once per year to the same customer, even if the cron runs multiple times on the same day.

18. Loyalty programme

Neria includes a complete email loyalty system: points accumulated with each interaction, rewarded tiers, automatic monthly recap.

The screenshot shows the 'LOYALTY PROGRAMME' configuration page. At the top, there's a status bar with '+ Active — Disable'. Below it, a row of six cards displays key metrics: 1 ACTIVE CUSTOMERS, 6 POINTS DISTRIBUTED, 0 VOUCHERS SENT, 6 OPENS (+3 pt), 0 CLICKS (+3 pts), and 0 TRACKED PURCHASES (+10 pts). A section for 'CROSS-SHOP ACCUMULATION (MULTISTORE)' allows choosing between 'Accumulated across all shops' and 'Accumulated across all shops'. The 'TIER CONFIGURATION' section shows three tiers: Bronze (50 points, £5 reward), Silver (150 points, £10 reward), and Gold (300 points, £20 reward). Each tier has a checkbox for 'Percentage discount (otherwise fixed amount C)'. A 'SAVE TIERS' button is at the bottom right. Below the tiers, a 'TOP 40 CUSTOMERS — LOYALTY POINTS' table is partially visible, showing columns for #, CUSTOMER, and POINTS.

18.1 Points allocation

- Email open: +1 point
- Click in an email: +3 points
- Validated purchase: +10 points (configurable)

Real-time metrics (active customers, points distributed, vouchers sent, opens, clicks, tracked purchases) are visible at the top of the section.

18.2 Loyalty tiers

Three tiers are configurable (point threshold, reward as a fixed amount or percentage):

- Bronze: 50 points — £5 voucher (default)
- Silver: 150 points — £10 voucher (default)
- Gold: 300 points — £20 voucher (default)

1. Edit the threshold and reward amount for each tier.
2. Tick 'Percentage discount' if you prefer a percentage rather than a fixed amount.
3. Click Save tiers.

18.3 Loyalty emails

- loyalty_tier_upgrade: automatic email as soon as a customer reaches a tier, with their reward voucher.
- loyalty_recap: monthly summary of the customer's points.
- loyalty_reward_expiry: alert sent 7 days before a reward voucher expires.

18.4 Multi-store accumulation

On a multi-store installation, the 'Cross-store accumulation' toggle allows you to choose whether points accumulate across all stores or remain isolated per store. Default: accumulated across all stores.

19. Segments tab — Behavioural segmentation

Neria automatically classifies each customer into one of 5 behavioural segments, recalculated daily from email and purchase history.

CUSTOMER SEGMENTATION

Neria analyses each customer's email behaviour and automatically assigns them to a segment. Daily recalculation.

RECALCULATE NOW (button) Recalculation also runs automatically every night.

Ambassador (segment icon)

Loyal (segment icon)

Warm (segment icon)

Dormant (segment icon)

Ghost (segment icon)

Churn risk (warning icon)

Customers whose risk score exceeds 75/100, ranked by descending score. Score calculated on the open rate trend over 90 days. This calculation analyses all your customers across all segments. A customer may have a low score in their segment but still appear here if their recent behaviour declines.

RECALCULATE SCORES (button) Recalculation also runs automatically every night.

CUSTOMER	EMAIL	SCORE	TREND (P ₂ -P ₁ -P ₀)	LAST OPEN
test neria	adrian@test.com	80/100	10%-10%-10%	---

12-MONTH CUSTOMER POTENTIAL - TOP 240

#	CUSTOMER	EMAIL	12-MONTH CUSTOMER POTENTIAL	AVG. ORDER	EMAIL OPEN	SEGMENT	CHURN RISK
1	test neria	adrian@test.com	796 €	24 €	10%	2	80/100

19.1 The 5 segments

- **Ambassador:** consistently opens emails, has converted at least twice. Most engaged customers.
- **Loyal:** opens regularly, at least 1 conversion. Faithful customers.
- **Warm:** opens occasionally, last email opened less than 90 days ago.
- **Dormant:** last email opened more than 90 days ago. Risk of disengagement.
- **Ghost:** has never opened a Neria email. May indicate a deliverability issue or genuine disinterest.

19.2 Using segments in campaigns

In seasonal campaigns and manual send filters, the Segment field allows targeting only customers in one or more segments (e.g. sending a win-back offer exclusively to Dormant and Ghost customers).

CUSTOMER | **EMAIL** | **SCORE** | **TREND (P₂-P₁-P₀)** | **LAST OPEN**

test neria | adrian@test.com | 80/100 | 10%-10%-10% | ---

12-MONTH CUSTOMER POTENTIAL - TOP 240

#	CUSTOMER	EMAIL	12-MONTH CUSTOMER POTENTIAL	AVG. ORDER	EMAIL OPEN	SEGMENT	CHURN RISK
1	test neria	adrian@test.com	796 €	24 €	10%	2	80/100

Formula: avg_order + (days/month) + av_engagement + segment + retention

Launch a targeted campaign

Select a segment and a template. The email will be sent to all customers in this segment (max 200).

How to use targeted campaigns?

A targeted campaign sends an email to all customers in a behavioural segment in one action. Neria automatically calculates who belongs to which segment based on purchase history and opened emails.

1. Choose a segment — e.g. Ambassadors (your best customers) or Ghost (inactive for 90+ days).
2. Choose an email template — the template marked * is the one recommended by Neria for this segment.
3. Filter with filters (optional): language, country or predefined time slot. Filters are cumulative.
4. Click Send — the email is sent immediately to all matching recipients (max 200).

Tip: start with the Ambassador segment using loyalty_reward to retain your best customers, then target the Ghost segment with win_back to reactivate inactive ones.

SEND (button) Filters are cumulative.

20. Golden Hour — Best sending time

The Golden Hour feature analyses email opens by day of the week and hour, per language, to determine the time window when your customers are most likely to open an email.

The darker cells indicate the time slots with the most opens. The Less → More opens legend at the bottom of the heat map helps calibrate the reading. A confidence indicator based on the volume of data collected specifies the reliability of the recommendation.

Note — Golden Hour is informational: it does not automatically change the sending time of behavioural crons. Use this data to manually configure the time of your server cron.

21. Individual purchase window

The individual purchase window detects each customer's preferred purchase hour from their order history. Behavioural emails are queued and delivered at this optimal time — not a global hour, but an individual hour per customer.

The dashboard displays in real time: emails queued, sent over 30 days, average delay, percentage of customers with a detected window, and overall peak hour.

21.1 Enabling the queue

1. In Home → General settings, enable the Send at customer's preferred time toggle.
2. Behavioural emails are now queued and sent at each recipient's historical purchase hour.

Note — From 2 purchases confirmed at the same hour, the pattern is considered reliable. Customers without a detected window receive their emails immediately, without delay.

22. Upsell and collection completion

22.1 Intelligent upsell

The upsell engine automatically selects a product to suggest in post-purchase emails (D+14 after delivery) according to 3 priority levels:

- Level 1 — Accessory: product manually associated in the PrestaShop product sheet.
- Level 2 — Co-purchase: product statistically ordered together by other customers.
- Level 3 — Bestseller: top seller in the same category (guaranteed fallback).

The dashboard displays suggestions, clicks, conversions, revenue generated, and average basket value. The Preview section allows simulating the upsell block for any delivered order without sending a real email.

Note — Products already purchased by the customer and out-of-stock items are automatically excluded from the suggestion.

22.2 Complete your look

48 hours after confirmed delivery, the look_completion email suggests 2 to 3 complementary products according to the category → products association rules defined in the back office.

COMPLETE YOUR LOOK + Active — Disable

48h after delivery, suggests 2-3 complementary products according to the rules you define per category.

HOW IT WORKS
Define association rules: for each category in your store, indicate 2 to 3 complementary products to suggest. The cron detects every day orders that moved to Delivered status 48h ago and automatically sends the email with the products defined in the matching rule.
Key moment: the email arrives when the customer has the product in hand and is in a positive emotional state — the best time for a complementary suggestion. Only one email per order (automatic deduplication).

0 RULES	0 ACTIVE	0 EMAILS SENT	0 LAST 48 DAYS
-------------------	--------------------	-------------------------	--------------------------

TRIGGER CATEGORY: — Choose a category — SUGGESTED PRODUCT IDS (e.g., COMMA-SEPARATED): ex: 12, 47, 83 ADD

No rule defined. Add your first category — products association above.

1. Select a trigger category from the drop-down menu.
2. Enter the suggested product IDs (2 to 3, separated by commas).
3. Click Add. The rule is active immediately.

Note — One email per order — automatic deduplication. The email arrives when the customer has the product in hand, at the best moment for a complementary suggestion.

22.3 Collection completion

Neria detects customers who are one item away from completing a collection and automatically sends them an email highlighting the missing product.

COLLECTION COMPLETION

Active

Disable

Detects customers who are one piece away from completing a collection and sends them a personalised email.

HOW IT WORKS

Define your collections below (a set of 2 to 6 related products). Every day, Neria analyses your customers' orders and detects those who have bought every piece but one. A "your collection is almost complete" email is automatically sent to them, highlighting the missing product.

De-duplication: only one email is sent per customer and per collection, even if the customer keeps buying other pieces afterwards. The email is personalised with the photo and price of the missing product.

Example: a 3-piece tea set (teapot, cup, saucer). A customer buys the teapot and the cup → Neria automatically sends them an email suggesting the missing saucer to complete their set.

3 COLLECTIONS

3 ACTIVE

2 EMAILS SENT

2 LAST 30 DAYS

COLLECTION NAME

ADD A PRODUCT

ex: Trio bain visage

Search by name or reference...

ADD

PRODUCTS IN THIS COLLECTION

Select at least 2 products to create a collection.

NAME	PRODUCTS	PIECES	STATUS	ACTIONS
Collection Colibri	T-shirt imprimé colibri Croissant colibri Pâté imprimé colibri	3	Active	✕
Collection Colibri	T-shirt imprimé colibri Croissant colibri Pâté imprimé colibri	3	Active	✕
Collection Ours Brun	Croissant ours brun Canot de notre Ours... Illustration...	3	Active	✕

1. Enter the collection name (e.g. Facial Care Trio).
2. Enter the product IDs that make up the collection, separated by commas.
3. Click Add. Neria monitors orders from the next day.

Note — One email per customer per collection, even if the customer continues purchasing other items from the collection later.

23. Product waitlist

When a product is out of stock, Neria displays a 'Notify me when available' button on the product page. As soon as stock is replenished, a single email is sent to the customer with a time-limited reservation.

23.1 Configuration

1. In Home → Waitlist, enable the feature.
2. Configure the reservation duration (the time during which the product is 'reserved' for the customer before becoming publicly available again).
3. Customise the button text (per language) in the Translations tab.

23.2 Managing registrations

The Waitlist page displays global statistics (customers waiting, products monitored, notified) as well as a per-product table with the number of registrations and maximum waiting time.

24. A/B Tests tab

Neria allows testing two variants of the same email — subject line, content, or design — on a sample of recipients, and automatically designating the winning variant.

24.1 Creating a test

1. Click New A/B test.
2. Select the template to test.
3. Enter the subject line and/or body of variant B (variant A is the original template).
4. Define the split (e.g. 50% A / 50% B, or 70% / 30%).
5. Click Launch test. A/B assignment is attributed to each customer by consistent hash — without an extra table, the same customer always receives the same variant.

24.2 Tracking results

The test dashboard displays real-time open rates, click rates, and conversion rates for each variant, with the statistical confidence interval.

24.3 Designating the winner

1. Once sufficient volume is reached (statistical significance > 95%), click Designate winner.
2. Select variant A or B. It becomes the default template for all subsequent sends.
3. The test moves to Completed status. The losing variant is archived.

SPLIT A: 50 %	SPLIT A: 50 %	SPLIT A: 50 %
CREATE AND ACTIVATE	CREATE AND ACTIVATE	CREATE AND ACTIVATE

Template	Variant A	Variant B	Opens	Clicks	Bn	Winner	Confidence	Applied	End
newsletter	Objet original	Objet reformulé -urgence-	30.0% / 30.0%	0.0% / 0.0%	0.000 / 0.000	B	99%	✓	30/07/2026

25. Statistics tab

The Statistics tab brings together all of Neria's analytical data: tracking, attribution, deliverability, customer scoring, and domain reputation.

25.1 KPI dashboard

- Emails sent, opened, clicked, converted over the selected period.
- Open rate, click rate, conversion rate, and unsubscribe rate.
- Comparison with the previous period (trend arrows).
- Top 5 best-performing templates.

25.2 Open and click tracking

Neria injects a 1x1 tracking pixel in every HTML email and transforms all links into tracked links. The `track.php` front controller logs each event (open, click) in `neria_stat` and immediately redirects the customer to the target URL.

25.3 Revenue attribution

When a customer clicks in a Neria email, a `neria_ref` cookie is placed (24h duration). If an order is placed within that window, the order is attributed to Neria with the triggering template. The attributed revenue is visible in the Statistics tab.

SENDING DOMAIN REPUTATION

1 day
30 days
90 days
Compared on 2024-07-29 10:12:19
Refresh

HOW IT WORKS

Every day, Neria checks your sending domain's reputation on three fundamental criteria: **SPF** (authentication of your sending server), **DKIM** (cryptographic signature of emails) and **DMARC** (policy in case of spoofing). A well-configured domain leads in the table; a poorly configured one ends up in spam – or is directly rejected.

Scores: 0–49 Critical | 50–74 Fair | 75–100 Excellent. Click **Refresh** after changing your DNS to see the new score immediately.

30
0
test.com
Last checked: 2024-07-29 10:12:19
0 – Critical
50 – Fair
100 – Excellent

SPF
Missing – requires risk

DKIM
Missing – no signature

DMARC
Missing – high open risk

PTR / DNS
Not applicable (Good IP)

BIMI
Not applicable (Good IP)

BIMI – Logo display in the mailbox
Not eligible: BIMI requires DMARC set to `quarantine` or `reject`

RECOMMENDATIONS

Missing SPF: Add a TXT record `v=spf1 include:yourtest.com ~all` to your DNS.

Missing DKIM: Enable DKIM signing with your email host or ESP (OVH, Ionos, Infomaniak...).

Missing DMARC: Add `_dmarc.test.com TXT "v=DMARC1; p=quarantine; rua=mailto:dmarc@test.com"`

25.4 Deliverability score

Neria analyses the HTML of each email and calculates a deliverability score from 0 to 100, based on: presence of spam words (FR/EN/DE/ES/IT/PT), text/image ratio, suspicious links, missing tags, total weight. The score is displayed on each template in the list.

RECOMMENDATIONS

Missing SPF: Add a TXT record `v=spf1 include:yourtest.com ~all` to your DNS.

Missing DKIM: Enable DKIM signing with your email host or ESP (OVH, Ionos, Infomaniak...).

Missing DMARC: Add `_dmarc.test.com TXT "v=DMARC1; p=quarantine; rua=mailto:dmarc@test.com"`

GOOGLE PAGESPEED INSIGHTS

Performance - Accessibility - SEO - Core Web Vitals - Free API key

HOW IT WORKS

Google PageSpeed Insights analyses your store's **technical quality** and assigns four scores from 0 to 100: **Performance** (load speed), **Accessibility** (usability for everyone), **SEO** (technical search signals) and **Best Practices** (security, web standards).

CORE WEB VITALS

These three metrics have been imposed by Google since 2021 and directly influence your ranking in search results:

- LCP** – time until the main content displays (ideal: under 2.5s)
- CLS** – visual stability of the page, avoids jumping elements (ideal: under 0.1)
- TBT** – time during which the page is blocked and non-interactive (ideal: under 300ms)

The analysis is free – the Google API key is enough. The cache is renewed every 24 hours.

How to get a free key:

- 1. Create a [Google account](#) –> APIs & services –> Library –> Enable **PageSpeed Insights API**
- 2. Credentials –> Create API key –> copy the key

Google API key:

URL to analyse (optional – public URL if your store is live):

SAVE

GOOGLE SEARCH CONSOLE

Impressions - Clicks - CTR - Average position - Top queries - See OAuth

HOW IT WORKS

Google Search Console gives you access to **official Google data** about your store's presence in search results. Unlike Google Analytics, these figures come directly from Google Search – they are 100% reliable.

WHAT YOU GET

- Clicks** – number of times a visitor clicked on your store in Google
- Impressions** – number of times your store appeared in the results
- CTR** – click-through rate (clicks ÷ impressions): the higher it is, the more your titles attract
- Average position** – average ranking of your pages in Google (1 = first position)
- Top 10 queries** – the keywords that generate the most traffic to your store
- Top 10 pages** – your most visited pages from Google

Free connection via your Google account. Data over all days, with 2-3 days of latency (normal delay required by Google).

SETUP GUIDE – 5 STEPS

1. **Create a new project** (bottom left, next to the Google Cloud logo). Give it a name like "Neria 2024".
2. In the left menu: **APIs & services** –> **Library**. Search for "Google Search Console API" and click **Enable**.
3. Left menu: **APIs & services** –> **OAuth consent screen**. Choose **External**, enter an app name and your email, leave the rest blank. In **Authorized domains**, add your own Google address as a test user.
4. Left menu: **APIs & services** –> **Credentials** –> **Create credentials** –> **OAuth 2.0 Client ID**. Application type: **Web application**. In "Authorized redirect URIs", copy this exact URL and paste it: `http://localhost:3000/callback`. Click **Copy**.
5. After creation, Google shows a popup with the **Client ID** and **Client secret**. Copy them and paste them in the fields below. Note: the **Client secret** is shown only once – if you lose it, click "Show" in Google Cloud to generate a new one.

25.5 Churn score

The churn score (0–100) measures the unsubscribe risk of each customer, calculated daily from recency, recent open rate, and trend over 3 periods of 30 days. Customers with a score > 70 are flagged in red on their profile.

ADVANCED SEO API (OPTIONAL)

Search or Most – authority, backlinks, organic keywords

HOW IT WORKS

Advanced SEO APIs complement PageSpeed and Search Console by adding the **competitive dimension**: where does your store rank against competitors, what is its authority in the eyes of Google?

SEMRUSH

- Estimated organic traffic** – estimated monthly visitors from Google
- Ranking keywords** – the number of queries your store appears for in Google
- Top keywords** – the queries that bring you the most visibility

MOZ

- Domain Authority (DA)** – 0-100 score of your domain's overall strength (the higher, the better)
- Page Authority (PA)** – specific strength of your homepage
- Spam Score** – risk of Google penalizing linked to suspicious backlinks (ideal: close to 0)
- Backlinks** – number of inbound links from other sites

Optional section – requires a paid subscription with Semrush or Moz. Without a paid API, PageSpeed and Search Console already cover the essentials.

Provider

— None —

API

Without a paid API, you can still measure your visibility via PageSpeed and Search Console alone. Paid APIs add the **competitive dimension**: where do you stand compared to your competitors?

GOOGLE POSTMASTER TOOLS

Without a paid API, you can still measure your visibility via PageSpeed and Search Console alone. Paid APIs add the **competitive dimension**: where do you stand compared to your competitors?

GOOGLE POSTMASTER TOOLS

Connect your Google account to display directly in Vista the reported spam rate, domain reputation, and SPF/DKIM/DMARC status measured by Gmail.

OAuth 2.0 configuration

Create a Google Cloud project, enable the Gmail Postmaster Tools API, then create OAuth 2.0 credentials (type "Web application") with the following redirect URI:

`http://[storeId]/shop/index.php?module=GmailPostmasterTools&controller=GLM/oauth`

Setup steps:

1. console.cloud.google.com – New project –> **APIs & services** – **Library**
2. Search for "Gmail Postmaster Tools API" –> **click Enable**
3. **APIs & services** – **OAuth consent screen** – **External** – enter a name > your email –> in **Authorized**, add your Google address as a test user
4. **APIs & services** – **Credentials** –> **Create credentials** – **OAuth 2.0 Client ID** –> **Type: Web application** –> paste the redirect URI above into "Authorized redirect URIs"
5. Copy the **Client ID** and **Client secret** shown by Google and paste them below.

A Your domain must be verified in Google Search Console for Postmaster Tools to display data.

Client ID

Client Secret

SAVE CREDENTIALS

Tip: A spam rate above 0.5% on Google Postmaster causes an immediate drop in your deliverability. Below 0.4%, you are in the green zone.

MICROSOFT Snds

searchengine.sds.microsoft.com/index

25.6 CLV — 12-month customer lifetime value

CLV (Customer Lifetime Value) is estimated by the formula: average basket $\times$ purchase frequency $\times$ email engagement score $\times$ segment coefficient $\times$ risk factor (churn). The Top 20 customers by CLV are displayed in the Statistics tab.

MICROSOFT SNDS

sendersupport-06.protection.outlook.com/inbox
Smart Network Data Services: your **sending IP's** reputation with Outlook and Hotmail. Shows the open complaint rate and your IP's filtering status. Essential for Outlook/Hotmail customers (very common in enterprises).

How to register:

1. Note your sending server's IP
2. Sign in on the SNDS site
3. Request access for your IP
4. You will receive a confirmation email

DELIVERABILITY SCORE

Analyse an email to check it won't land in the spam folder. Norta inspects the subject, text/HTML ratio, trigger words, weight, the unsubscribe link and several technical parameters.

HOW IT WORKS

Select a template and a language, then click **Analyse Deliverability**. Norta inspects the email according to 8 anti-spam criteria: subject line (length, trigger words), text/HTML ratio, total weight, unsubscribe link, sending domain, images without alt text, and sender consistency.

Score: 90-100 Excellent - 75-89 Good - 60-74 Fair - < 60 Spam risk. Each failed criterion comes with a concrete recommendation to fix the issue.

LANGUAGE	SENTS	OPEN RATE	OPEN BAR	CLICK RATE	CLICK BAR
----------	-------	-----------	----------	------------	-----------

GOLDEN SEND HOUR +

Time window when your customers open your emails the most, by language - based on the last 90 days.

HOW IT WORKS
Neria analyses the last 90 days of opens to identify, per language, the day and time slot when your customers read their emails the most. This data automatically feeds the **Purchase window** feature: behavioral emails (reminders, birthdays, upsell...) are scheduled at each customer's preferred time.
Data: the **Reliable** status indicates sufficient confidence (≥ 20 opens). Below that, data is marked **Insufficient** and Neria uses a default slot (noon+1pm). The tracking pool must be active to accumulate data.

LANGUAGE	BEST DAY	BEST HOUR	OPENS	DATA
en Français	Sunday	10h - 11h	82	GOOD
es Español	Sunday	10h - 11h	80	GOOD
en English (US)	Sunday	09h - 11h	75	GOOD
de Deutsch	Sunday	09h - 11h	70	GOOD

Hours in current time (approximation). The tracking pool must be enabled to accumulate data.

CHECKOUT ABANDONMENT +

Customers who reached the payment page (cartier + addresses selected) but did not complete. A reassuring email is automatically sent 1h after abandonment, without a promotion.

2 EMAIL SENTS | 0 ORDERS RECOVERED | 0.00 € REVENUE RECOVERED | 0 % CONVERSION RATE

HOW IT WORKS
Neria detects carts where the carrier and both addresses were selected but no order was completed. A reassuring email ("technical issue" tone) is sent once per cart, 1h after abandonment.
As the Merchant's cart is not a confirmed order, this email will not count towards the order & revenue from the last 90 days.

25.8 Customer email history

On each customer's PrestaShop profile (Back office → Customers), a Neria block displays the complete timeline of emails received by that customer: date, template, status (sent, opened, clicked, converted), global engagement badge. A button allows exporting the history to CSV.

CHECKOUT ABANDONMENT +

Customers who reached the payment page (cartier + addresses selected) but did not complete. A reassuring email is automatically sent 2h after abandonment, without a promotion.

[+ Active — Disable](#)

2 EMAILS SENT	0 ORDERS RECOVERED	0.00 € REVENUE RECOVERED	0 % CONVERSION RATE
-------------------------	------------------------------	------------------------------------	-------------------------------

HOW IT WORKS

Neria detects carts where the carrier and both addresses were selected but no order was completed. A reassuring email ("technical issue" tone) is sent once per cart, 2h after abandonment.

Deduplication: 1 customer who receives this email will not receive any of the 3 abandoned cart reminders for the same cart, and vice versa.

CUSTOMER RELATIONSHIP ANNIVERSARY +

Every year, on the exact date of their first purchase, your customers receive a personal email. "Two years ago, you trusted us for the first time."

[+ Active — Disable](#)

⚠️ Duplicate warning: the first customer anniversary template (first_anniversary) also sends an email on day 252 after the first purchase. If both are active, your customers will receive two emails the same day for their first year. We recommend **disabling first_anniversary** in the manual email tab if you use this feature.

2 EMAILS SENT	0 ORDERS ATTRIBUTED	0.00 € ATTRIBUTED REVENUE	0.00 € AVERAGE ORDER
-------------------------	-------------------------------	-------------------------------------	--------------------------------

HOW IT WORKS

Every day, the CRM detects customers whose first purchase date matches today (same day, same month), with at least 1 year of anniversary. The email automatically adapts to the year: "One year ago...", "Two years ago...", "Three years ago..." — in the customer's language.

Attribution: any order placed within 48 hours of sending is counted in the attributed revenue.

SMART UPSELL +

Complementary product automatically suggested in the post-purchase email (day 14 after delivery).

[+ Active — Disable](#)

WHAT IT'S FOR

14 days after delivery, Neria slips a **single complementary product** into the follow-up email, automatically chosen according to 3 criteria, in this priority order:

- 1. Accessory** that you have linked to the purchased product - **2. Frequently bought together** (derived from your orders) - **3. Bestseller** from the same category.

Products already purchased by the customer (or already in their order) are excluded, and only items in **stock** are proposed. If the customer clicks and then orders within 7 days, the sale is counted in "Revenue generated" below — your return on investment, automatic and efficient.

0 SUGGESTIONS	0 CLICKS 0%	0 CONVERSIONS 0%	0.00 € REVENUE GENERATED	0.00 € AVERAGE ORDER
-------------------------	--------------------------	-------------------------------	------------------------------------	--------------------------------

Accessories 10 **Co-purchases** 10 **Categories** 10

PREVIEW THE EMAIL YOUR CUSTOMER WILL RECEIVE

Instructions: enter the number or reference of a delivered order, then click "Preview". You will see the exact block that will be inserted in this customer's follow-up email — including image, price and button. **No email is sent:** it's a simulation to check the relevance of the suggestion before it actually goes out.

Number or ref. (e.g. 12 or MEN-001) **PREVIEW**

No suggestions sent yet, post_purchase_revenue_email (day 14 after delivery) will trigger suggestions automatically.

OPTIMAL PURCHASE WINDOWS 🎯

Customers whose propensity score currently exceeds 75/100 — the ideal moment to send them a targeted offer.

[+ Active — Disable](#)

HOW IT WORKS

Every night, Neria calculates a purchase propensity score (0-100) for each customer who has already ordered, based on 4 factors:

OPTIMAL PURCHASE WINDOWS 🎯

Customers whose propensity score currently exceeds 75/100 — the ideal moment to send them a targeted offer.

[+ Active — Disable](#)

HOW IT WORKS

Every night, Neria calculates a purchase propensity score (0-100) for each customer who has already ordered, based on 4 factors:

- Recency (0-40 pts)** — Full score if purchase < 7 days ago, zero at 90 days, linear decrease in between.
- Frequency (0-25 pts)** — Number of orders per month over the full history.
- Engagement (0-25 pts)** — Opens and clicks over the last 30 days (1 pt/open, 2 pts/click).
- Personal seasonality (0-10 pts)** — Has this customer historically bought more during this particular month?

Customers reaching 75/100 appear here as being in an optimal purchase window. Click **Send offer** to go directly to the manual send form pre-filled with this customer.

CUSTOMER	SCORE	RECENTY	FREQUENCY	ENGAGEMENT	SEASONALITY	LAST PURCHASE	ACTION

INDIVIDUAL PURCHASE WINDOW 🎯

Neria detects each customer's natural purchase time and automatically schedules behavioral emails to arrive within that window — not a global time, a time per customer.

[+ Active — Disable](#)

HOW IT WORKS

Neria analyzes each customer's validated order history to detect the time at which they naturally buy. From a **purchase at the same hour**, a pattern is considered reliable. Behavioral emails (birthday, win-back, cart reminder...) are no longer sent immediately but **queued** and **delivered** at the customer's preferred time — the same day if possible, otherwise the next day.

Customers without a detected window (first purchase or purchases too scattered) always receive their emails immediately. This feature is **different from and complementary** to the global time slot per language.

0 PENDING EMAILS	2 SENT (per day)	12h AVERAGE DELAY	3% CUSTOMERS WITH WINDOW	13h PEAK HOUR
----------------------------	----------------------------	-----------------------------	------------------------------------	-------------------------

PRODUCT END-OF-LIFE REMINDER 🕒

Define the estimated lifespan of your consumable products. Neria automatically sends a reminder email X days before the estimated depletion date.

[+ Active — Disable](#)

HOW IT WORKS

Associate a **lifespan in days** to your consumable products (creams, capsules, filters, supplements...). Neria calculates the estimated depletion date from the purchase date and automatically sends a reminder email X days before that date — at the right moment to trigger a repurchase.

Tip: allow > 14 days to leave time for delivery. If a customer has already repurchased the product in the meantime, the email is automatically cancelled.

Product ID Lifespan (days) Alert X days before

456-42 456-30 7 **Add**

No product configured. Add a product above to get started.

POST-REFUND RECONCILIATION +

ACTIVE — DISABLE

Automatic sequence of 3 emails to win back refunded customers.

HOW IT WORKS

As soon as a refund is recorded in PrestaShop, Neria schedules a sequence of 3 discreet emails: **day 1** (personal confirmation), **day 3** (exclusive attention), **day 7** (gentle invitation to return). The sequence is automatically cancelled if the customer places a new order in the meantime.

Potential: a refunded customer who receives this treatment is statistically more likely to buy again than a customer without an issue – resolution creates a stronger emotional bond than a smooth transaction.

0 SCHEDULED SEQUENCES00+1 SENT00+3 SENT00+7 SENT0 CANCELLED (repurchase)

B2B QUOTE REMINDERS +

ACTIVE — DISABLE

Automatic sequence of 3 emails for B2B quotes: reminder 48h before expiry, reminder on the day, extension offer after expiry.

HOW IT WORKS

Add your quotes below (reference, customer, amount, expiry date). Neria automatically sends **3 reminder emails**: 2 days before, on the day, then an extension offer the day after expiry. Mark a quote as Won as soon as the customer confirms – this stops the sequence and creates the sale.

Potential: 50 to 65% of expired quotes are due to forgetfulness, not lack of interest. A well-worded reminder recovers them efficiently.

0 QUOTES TRACKED0 ACTIVE0 WON0%0.00 € REVENUE RECOVERED0 LOST / EXPIRED

ADD A QUOTE TO TRACK

Manual entry: PrestaShop does not actively generate quotes. Record here the quotes you create elsewhere (management software, spreadsheet, third-party module) that you want to be reminded automatically. Identify the customer by their ID or email – they must already exist in your store.

Automatic sequence of 3 emails for B2B quotes: reminder 48h before expiry, reminder on the day, extension offer after expiry.

HOW IT WORKS

Add your quotes below (reference, customer, amount, expiry date). Neria automatically sends **3 reminder emails**: 2 days before, on the day, then an extension offer the day after expiry. Mark a quote as Won as soon as the customer confirms – this stops the sequence and creates the sale.

Potential: 50 to 65% of expired quotes are due to forgetfulness, not lack of interest. A well-worded reminder recovers them efficiently.

0 QUOTES TRACKED0 ACTIVE0 WON0%0.00 € REVENUE RECOVERED0 LOST / EXPIRED

ADD A QUOTE TO TRACK

Manual entry: PrestaShop does not actively generate quotes. Record here the quotes you create elsewhere (management software, spreadsheet, third-party module) that you want to be reminded automatically. Identify the customer by their ID or email – they must already exist in your store.

Customer ID or emailQuote referenceAmount incl. tax (€)Expiry date

Ex: 42 ou client@neria.comEx: DEVIS-2028-042Ex: 1250.00\$/min/aaaADD

No quotes recorded. Use the form above to add your first quote to track.

25b. Customer history tab

The Customer history tab offers a consolidated view of all emails sent by Neria, filterable by customer, template, language, status, and period. Unlike the block on the customer profile (which shows a single customer's history), this tab provides a global multi-customer view.

25b.1 Available filters

- Customer: search by name or email address.
- Template: filter by email type (e.g. all birthday emails sent).
- Status: sent, opened, clicked, converted, bounced.
- Language: filter by sending language.
- Period: start and end date selector.

25b.2 CSV export

The Export CSV button downloads all filtered rows with all columns: date, customer, template, language, status, attributed amount.

26. Automatic monthly report

On the 1st of each month, Neria automatically sends a comprehensive email performance report to the configured recipient(s). This report includes: global monthly KPIs, top and bottom templates, champion language, best sending time, A/B results, attributed revenue, and 3 automatic recommendations generated from the data.

27. Sending domain reputation

Neria checks your sending domain's reputation daily via 4 axes: SPF, DKIM (17 selectors tested), DMARC, and 42 DNS blacklists (RBLs). Results are cached for 24 hours and displayed in the Statistics tab.

27.1 Interpreting results

- SPF : your domain authorises the sending server. Essential.
- DKIM : the cryptographic signature is valid. Strongly recommended.
- DMARC : the DMARC policy is published. Recommended (policy=quarantine or reject).
- RBL : your IP is not on any known blacklist. Critical for deliverability.

Note — If an SPF or DKIM warning appears, consult your hosting provider's documentation to publish the missing DNS records.

28. Google and SEO integrations

28.1 Gmail Postmaster Tools

Neria integrates with the Gmail Postmaster Tools API via free OAuth 2.0. It displays real Google reputation data in the back office: reported spam rate, domain reputation, IP reputation, and SPF/DKIM/DMARC success according to Google.

1. In Statistics → Postmaster, click Connect with Google.
2. Authorise Neria to access your Postmaster data (read-only).
3. Data appears in the Postmaster dashboard.

28.2 Google Search Console

OAuth 2.0 integration with the Google Search Console v3 API. Displays impressions, clicks, CTR, average position, top queries, and top pages for your store. Data directly in the Neria back office.

1. In Statistics → Search Console, click Connect with Google.
2. Authorise access (read-only).
3. Select your Search Console property from the list.

28.3 Google PageSpeed Insights

Neria retrieves Lighthouse scores and Core Web Vitals (LCP, CLS, TBT) for mobile and desktop via the PageSpeed Insights v5 API (free Google Cloud API key). 24-hour cache.

1. In Home → Settings → PageSpeed API key, enter your key (obtained at console.cloud.google.com, free quota).
2. In Statistics → PageSpeed, click Analyse now.

28.4 Semrush and Moz (optional)

Optional integration with Semrush (traffic, keywords, backlinks) and Moz (Domain Authority, Page Authority, spam score). These tools require a paid API key.

1. In Home → Settings → SEO Integrations, enter your Semrush and/or Moz key.
2. SEO data appears in the Statistics → SEO tab.

29. Bounces tab — Invalid email management

Neria detects and automatically manages invalid email addresses via two channels: reading a configured IMAP/POP3 mailbox, and receiving inbound webhooks from ESPs (Mailgun, SendGrid, Postmark...).

29.1 IMAP configuration

1. In Bounces → Configuration, enter the bounce mailbox parameters (IMAP host, port, login, password). Typically a dedicated noreply@ mailbox.
2. Click Test connection to verify.
3. Enable IMAP processing. Neria will read this mailbox at each cron run and extract NDRs (Non-Delivery Reports).

29.2 ESP webhook configuration

If you use Mailgun, SendGrid, or Postmark, configure the webhook URL provided by Neria (Bounces → Configuration → Webhook URL) in your ESP to receive real-time bounce notifications.

29.3 Hard bounce and soft bounce

- Hard bounce: permanently invalid address (unknown user, non-existent domain). Blocked immediately and permanently by Neria.
- Soft bounce: temporary failure (full mailbox, server unavailable). Blocked after N consecutive failures (configurable threshold, default: 3).

30. Authenticity certificates

Neria automatically generates and attaches an authenticity certificate in PDF format to the order confirmation email for stores selling unique or numbered items.

30.1 Configuration

1. In the Certificates tab, enable automatic generation.
2. Customise: title, subtitle, body text, logo, signature.
3. Choose whether to include a QR code (links to an online verification page).
4. Select the automatic numbering format (e.g. CERT-2026-00001).

30.2 Issuing a certificate manually

From the PrestaShop order page (Neria block at the bottom), an Issue certificate button allows generating and sending the PDF manually for a specific order.

⚠ Important — Each certificate contains a unique serial number. Never duplicate or reuse a certificate between stores.

31. Customer preference centre

Every email sent by Neria includes a 'Manage my preferences' link allowing the customer to precisely choose the email categories they wish to receive, without fully unsubscribing.

The preferences page is accessible via the 'Manage my preferences' link in every email footer. It displays in the store's theme and allows the customer to enable or disable each email category independently.

31.1 Preference categories

- Transactional emails: order confirmation, shipping, delivery (always enabled, cannot be disabled).
- Marketing emails: campaigns, calendar occasions.
- Abandoned baskets: basket recovery follow-ups.
- Loyalty programme: points, tiers, monthly recap.
- Behavioural emails: birthdays, win-back, post-purchase.
- Seasonal emails: merchant's recurring campaigns.
- B2B emails: quotes, professional follow-ups.

31.2 Global unsubscribe

The unsubscribe page (accessible via the link in the email footer) enables a full, HMAC-SHA256 token-secured unsubscribe. Compatible with one-click unsubscribe RFC 8058 (Gmail, Yahoo).

The unsubscribe page is secured by a unique HMAC-SHA256 token per customer. It displays in the store's theme and offers a full one-click unsubscribe, RFC 8058 compliant (Gmail, Yahoo Mail).

32. GDPR tab — Audit and compliance

The GDPR tab provides an automatic compliance dashboard and personal data erasure tools.

AUTOMATIC GDPR AUDIT

Real-time analysis of Neria's compliance with the General Data Protection Regulation.

Excellent — Neria is GDPR compliant
> point(s) to review - Report generated on 2024/01/20 à 09:20

1 — UNSUBSCRIBE SYSTEM

Legal requirement for any commercial email (GDPR art. 21 + ePrivacy Directive).

- ✓ **Lien de désabonnement dans le layout global**
Le bouton/link d'unsubscribe_url est présent dans layout.html.
- ✓ **Header List-Unsubscribe (RFC 2369 / One-Click RFC Bugfix)**
Le header est injecté automatiquement sur chaque email.
- ✓ **Endpoint de désabonnement (controllers/front/unsubscribe.php)**
Le contrôleur de désabonnement est bien présent.
- **Centre de préférences email (consentement granulaire)**
Le lien [preferences_url] est présent dans le layout et le contrôleur n'est en place.
- **Blacklist de désabonnement**
(à adresser). (disposable(s)). Le blacklist doit être conservé suffisamment (erreur de codage/min) — assurer purge ne doit être effectuée.

2 — DATA RETENTION

The GDPR requires a retention period that is limited and proportionate to the purpose of processing. Neria applies 36 months for commercial data and 12 months for technical data.

DATA	LIMIT	OLDEST	OVERDUE	STATUS
Statistiques d'envoi (tracking) Traqueur campagne/statistiques des destinataires.	36 months	2024/01/20	0	COMPLIANT
Journaux système (watchdog) Diverses logs/journaux système.	12 months	2024/01/20	0	COMPLIANT

32.1 Compliance score

Neria automatically calculates a GDPR compliance score on 3 axes: data retention duration (vs. legal retention periods), consent mechanism in place, and operational right to erasure. The overall score is displayed with detailed improvement points.

2 – DATA RETENTION				
The GDPR requires a retention period that is limited and proportionate to the purpose of processing. Netrix applies 36 months for commercial data and 12 months for technical data.				
DATA	LIMIT	OLDEST	OVERDUE	STATUS
Statistiques d'envoi (tracking) Données comportementales des destinataires.	36 months	01/04/2016	0	COMPLIANT
Journal système (watchdog) Données techniques internes.	12 months	23/07/2016	0	COMPLIANT
Emails comportementaux (déduplication) Inscriptions d'emails liés aux clients.	36 months	01/04/2016	0	COMPLIANT
Ségments comportementaux clients Profilés de comportement par client.	36 months	23/07/2016	0	COMPLIANT
Score de chaux clients Score de risque calculé par client.	36 months	20/07/2016	0	COMPLIANT
Filtre d'attente webhooks Payload HTTP post contenant email/lien client – purge par automatique.	12 months	23/07/2016	0	COMPLIANT
Historique des modifications de textes Changelogs internes – ne contiennent pas de données clients.	36 months	—	0	COMPLIANT
Préférences email clients Chaque utilisateur par catégorie, contenant l'envoi de liste.	36 months	—	0	COMPLIANT
Attribution de revenus (last-click) Pixel d'attribution – classe de clic. Purge par automatique (pas d'attributions directes).	36 months	—	0	COMPLIANT
Points de fidélité clients Solde et historique des points par client.	36 months	23/07/2016	0	COMPLIANT
Récompenses fidélité envoyées Bons de réduction générés par points attribués.	36 months	—	0	COMPLIANT
Liste d'attente produits Demandes de notifications clients en stock.	24 months	—	0	COMPLIANT
Filtre d'envoi (listeuse d'achat) Emails en attente d'envoi programmé – contenant email et nom destinataire.	3 months	01/07/2016	0	COMPLIANT
Deviz-Bill Deviz facturés mensuellement par le marchand.	60 months	—	0	COMPLIANT
Deviz-Bill mensuel (Deviz facture mensuelle)	60 months	—	0	COMPLIANT

32.2 Retention periods

Each Neria table has a configured retention period (default: 36 months for statistics, 12 months for technical logs). These durations are displayed in the GDPR tab table.

3 — PERSONAL DATA MAPPING			
Inventory of templates that use PrestaShop variables containing personal data. All these templates must have a legal basis (contract, consent, legitimate interest).			
Legal notice in the global layout A link to the legal notice is present in the footer of all mails.			
TEMPLATE	PERSONAL DATA DETECTED	PRESCRIBED LEGAL BASIS	
account	Adresse e-mail	Contract / Legitimate Interest	
collection_complation	Prénoms	Contract / Legitimate Interest	
complete_your_look	Prénoms	Contract / Legitimate Interest	
contact	Adresse e-mail	Contract / Legitimate Interest	
email_opt_in_banner	Prénoms, Yves de laetitia, Adresse e-mail	Contract / Legitimate Interest	
ghost_cart	Prénoms	Contract / Legitimate Interest	
ghost_my_customer	Adresse e-mail	Contract / Legitimate Interest

order_1234	Prénoms, Yves de laetitia, Adresse e-mail	Contract / Legitimate Interest	
website_available	Prénoms	Contract / Legitimate Interest	

32.3 Data erasure

1. To erase a specific customer's data: access their profile in PS → click Erase Neria data. All their data in Neria tables is deleted.
2. For an age-based erasure: in GDPR → Automatic erasure, click Erase data older than N months. Neria cleans all tables according to their respective retention periods.

3 — PERSONAL DATA MAPPING			
Inventory of templates that use PrestaShop variables containing personal data. All these templates must have a legal basis (contract, consent, legitimate interest).			
Legal notice in the global layout A link to the legal notice is present in the footer of all mails.			
TEMPLATE	PERSONAL DATA DETECTED	PRESCRIBED LEGAL BASIS	
account	Adresse e-mail	Contract / Legitimate Interest	
collection_complation	Prénoms	Contract / Legitimate Interest	
complete_your_look	Prénoms	Contract / Legitimate Interest	
contact	Adresse e-mail	Contract / Legitimate Interest	
email_opt_in_banner	Prénoms, Yves de laetitia, Adresse e-mail	Contract / Legitimate Interest	
ghost_cart	Prénoms	Contract / Legitimate Interest	
ghost_my_customer	Adresse e-mail	Contract / Legitimate Interest	
new_order	Prénoms, Yves de laetitia, Adresse e-mail	Contract / Legitimate Interest	
order_customer_comment	Prénoms, Yves de laetitia, Adresse e-mail	Contract / Legitimate Interest	
order_1234	Prénoms, Yves de laetitia, Adresse e-mail	Contract / Legitimate Interest	
website_available	Prénoms	Contract / Legitimate Interest	

4 — ENCRYPTION OF DATA AT REST			
Variable mapshots (first name, email, amount...) stored in the database are encrypted with AES-256-GCM — unreadable in the event of a data leak at the host.			
OpenSSL extension AES-256-GCM available on this server.			
Encryption key 256-bit key generated at installation — never exposed.			

132	0	132
------------	----------	------------

5 — AUTOMATIC GDPR AUDIT			
Real-time analysis of Neria's compliance with the General Data Protection Regulation.			
Excellent — Neria is GDPR compliant 0 point(s) to review - Report generated on 20/10/2023 à 10:09			
1 — UNSUBSCRIBE SYSTEM			
Legal requirement for any commercial email (GDPR art. 17 - ePrivacy Directive).			
✓ Lien de désabonnement dans le layout global Le placeholder {unsubscribe_url} est présent dans le layout global.			
✓ Header List Unsubscribe (RFC 4879 / One-Click RFC 8038) Le header list-unsubscribe est automatiquement rajouté dans les emails.			

Note — Individual erasure is triggered automatically by the actionDeleteGDPRCustomer hook when an account is deleted via the official PrestaShop GDPR module.

33. Sensitive data encryption

Neria automatically encrypts all sensitive data stored in the database via AES-256-GCM — the most robust authenticated symmetric encryption algorithm available in PHP. The merchant is informed upon opening the back office via a status banner at the top of the Home tab.

If a problem occurs (missing key, OpenSSL unavailable), the banner turns red with the details of the anomaly:

33.1 What is encrypted

- Third-party API keys: DeepL, Google PageSpeed, SEMrush, Moz (access ID + secret), Litmus, Email on Acid.
- Google OAuth: client secrets, access tokens, and refresh tokens — Postmaster Tools and Search Console.
- Webhook and bounce security: HMAC-SHA256 secret for outgoing webhooks, IMAP password for bounce management.
- Customer email history: the rendered_vars field — personalised variables of each archived email (first name, amount, order references...).
- GDPR data: audit exports generated by GdprAuditManager — personal data extracted for compliance reports.

33.2 How it works

- The AES-256 key is automatically generated at installation and stored in PrestaShop's configuration, outside the database.
- A random initialisation vector (IV) is generated for each record: the same message produces different ciphertexts each time.
- Encryption before insertion, decryption on read — entirely transparent to all other features.

33.3 Watchdog monitoring

The Watchdog runs 4 distinct checks on encryption at each diagnostic run:

- Round-trip test: encrypts a random string and immediately decrypts it to verify the key is working.

- Live data test: decrypts a sample of secrets already stored in the database — detects if the key was overwritten after a restore.
- Proactive check: verifies that every secret in the centralised list is properly encrypted and not stored in plaintext.
- Consistency check: if OpenSSL is absent from the server but encrypted data exists — immediate alert.

If a problem is detected, the status banner turns red in the back office, and an alert email is sent to the merchant.

33.4 Retrospective migration

If the encryption key is configured on an existing installation, all plaintext data already present in the database is automatically migrated on the first startup. No manual action is required.

34. Webhooks tab — Third-party integrations

Neria can notify third-party applications (CRM, Zapier, Make, n8n...) via HMAC-SHA256 signed HTTP POST on 5 key events.

The screenshot shows the 'WEBHOOKS — EXTERNAL CONNECTIONS' configuration page. It includes a 'HOW IT WORKS' section with three steps: 1. Enter the URL of your external endpoint (Zapier, Make, your API...), 2. Copy the HMAC secret into your tool to verify request authenticity, 3. Select the events to listen to, save, then click 'Test' to validate the connection. Below this is the 'Endpoint configuration' section with fields for 'ENDPOINT URL' (https://hooks.zapier.com/hooks/catch/xxxxx/yyyyy) and 'HMAC SECRET' (Auto generated if left empty). A 'GENERATE' button is next to the HMAC secret field. The 'TRIGGER EVENTS' section shows a list of events: EMAIL_SENT, EMAIL_OPENED, CONVERSION, UNSUBSCRIBED, and AB_WINNER, each with a checkbox and a description. A 'SAVE' button is at the bottom left. A 'JSON payload example' is shown at the bottom right.

34.1 Available events

- email_sent: email successfully sent.
- email_opened: email opened by the recipient.
- conversion: purchase attributed to a Neria email.
- unsubscribed: customer unsubscribed.
- ab_winner: A/B test winner designated.

34.2 Configuring an endpoint

1. In the Webhooks tab, click Add endpoint.
2. Enter the target URL (e.g. your Zapier or Make webhook).
3. Select the events to notify.
4. Copy the HMAC secret displayed to validate the signature on the receiving side.
5. Click Test to send a test event.

Note — In case of delivery failure (timeout or HTTP error), Neria makes 3 automatic retries with exponential back-off before abandoning. Failures are logged in the Watchdog log.

35. Silent witness — BCC archiving

The silent witness sends a blind carbon copy (BCC) of every outgoing email to a configurable archive address. Useful for internal auditing, editorial quality control, and legal traceability of communications.

1. In Home → General settings, enable the Silent witness toggle.
2. Enter the archive email address.

SILENT WITNESS

Receives an invisible (BCC) copy of every email Sista sends to your customers — a black box of all your email communication.

In practice: The address configured below receives an identical copy of every email – order confirmation, password reset, cart reminder, everything. Useful for checking the actual quality of what's sent, keeping proof in case of a customer dispute, or letting your team audit communication without back-office access.

Tip : This address will receive your customers' personal data (name, order, sometimes address). Make sure this stays compliant with your privacy policy and restrict access to this mailbox.

ARCHIVE EMAIL ADDRESS

admin@secret.com

Learn exactly how to do this. Use a dedicated mailbox (not your main address) so it doesn't get overwhelmed.

SAVE

37. Silence mode — Anti-duplicate

Silence mode prevents sending an identical email to the same customer within a configurable time window. If a template has already been sent recently to the same recipient, Neria automatically blocks the second send and logs it.

1. In Home → General settings, enable Silence mode.
2. Configure the global protection window (in minutes, from 1 to 60 — recommended: 10 min).

The screenshot shows the 'SILENCE MODE' configuration page. At the top right, there is a toggle switch labeled 'Inactive' and 'Enable'. Below this, there are three informational boxes: 'Duplicate prevention' (prevents sending identical emails a few minutes apart), 'Silence window' (configurable delay, e.g., 10 min, after which identical emails are blocked), and 'Deliverability impact' (reducing duplicates improves reputation). The 'PROTECTION WINDOW' section has a dropdown menu set to '10' minutes. Below this is a 'Daily SMTP quota' section with a text input field and a 'SAVE' button. A 'DAILY LIMIT' section at the bottom has a text input field set to '0' and a 'SAVE' button.

Note — Silence mode never blocks critical transactional emails (order confirmation, password reset). It applies only to behavioural and marketing emails.

38. Help tab — Watchdog & Diagnostics

Neria includes an internal monitoring system (Watchdog) that continuously checks more than 100 control points and logs everything in `neria_log`. The Help tab is the health control centre for the module.

38.1 Event log

The log displays all events with three severity levels:

- INFO — Normal operation, confirmed sends, completed purges.
- WARNING — Point to monitor, no immediate impact (e.g. deliverability score declining).
- ERROR — Anomaly to correct (e.g. send failure, rendering error).

38.2 Automatic alerts

- Any ERROR-level event triggers an immediate alert email to the merchant.
- WARNING-level alerts are grouped into a daily digest to avoid mailbox saturation.

38.3 Self-healing

Certain minor anomalies — behavioural scores not recalculated, outdated segmentation, expired translation cache — are automatically corrected by the Watchdog without intervention. These corrections are noted in the log with the 'auto-corrected' label.

38.4 Full diagnostic

1. In the Help tab, click Run full diagnostic.
2. Neria runs more than 100 health checks and displays a detailed report: registered hooks, table status, licences, cron, configuration.

The top screenshot shows the PrestaShop configuration page for the Neria - Luxury Email Suite. The 'Configure' section is active, displaying a list of modules with their status and configuration details. The bottom screenshot shows a detailed report of the full diagnostic, including module status, table status, licences, cron, and configuration.

38.5 Emergency page

In the event of a critical PrestaShop back-office failure, a standalone diagnostic page is available at: https://your-store.com/modules/neria/neria-emergency.php?token=YOUR_TOKEN. It works independently of PrestaShop.

1. Retrieve the emergency token in Help → Emergency token.
2. Access the URL above with your token.
3. The page displays the module status, recent errors, and quick-repair buttons.

39. Control centre

The Control centre allows the merchant to show or hide the link to each feature in the Neria menu, without changing their actual active/inactive status. Useful for simplifying the menu if certain advanced features are not in use.

1. For each feature, the colour dot indicates its actual status (green = active, red = inactive).
2. The toggle button on the right controls the visibility of the link in the menu (independent of status).
3. Hiding a link does not disable the feature — it continues to run in the background.

[illegible]

40. Neria Academy

The Academy tab provides training guides integrated directly into the back office, in the merchant's language. Eight guides are available at installation.

- Guide 1: Why is my open rate dropping — 8 causes • diagnosis • Neria solutions.
 - Guide 2: Writing a subject line that performs — 5 rules • before/after examples • words to avoid.
 - Guide 3: GDPR & email: the essentials — 3 legal bases • obligations • complete checklist.
 - Guide 4: Why my emails end up in spam — 4 pillars • authentication • reputation • content.
 - Guide 5: Using behavioural segmentation — 5 segments • targeting • strategies by profile.
 - Guide 6: Loyalty and upsell: increasing customer value — 3 tiers • points • post-purchase upsell.
 - Guide 7: A/B Testing: testing without mistakes — 4 rules • statistical thresholds • what's worth testing.
 - Guide 8: Recovering a basket without annoying — 3 follow-ups • 1h/24h/72h cadence • automatic stop.
1. Click a guide to open it full-page in the back office.
 2. Each guide is available in all 19 module languages.

Word - Landing Email Suite

[Back](#) [Translate](#) [Manage hooks](#)

1. Unrecognized sender name

Symptoms: emails arrive but are not opened

"temporarily-known-sender.com" suggests a suspicion, not a relationship. Recipients only open emails from people or brands they recognize and trust. The sender name is the first thing they see – before the subject line.

Solution : Use a human name tied to your brand, adapted by language ("Dupuis et La Motte-Laur" for EN, "Dupuis-diet La Motte-Laur" for FR).

[Configure link - Update sender by language](#)

2. Missing or poor preview text

Symptoms: the email preview shows "View this email in a browser..."

Preview text is the 2nd visible element in the inbox list. If absent, the email client displays the first text from the HTML... often an unsubscribe link or code... which damages your image and hurts open rates.

Solution : Write a preview text that complement(s) (not repeats) the subject line. Presta suggests it automatically in every template via the `preview_text` variable.

[Description link - preview_text field](#)

3. List fatigue

Symptoms: gradual decline over several weeks or months

It's not the case type of email or the email address location, recipients become disinterested and stop engaging. This is natural and becomes preventable beyond a certain threshold. The client segment starts to grow.

Solution : Reduce and frequency: exclude ghosts from your campaigns, vary content. Note's coldness system prevents over-substitution automation(s).

[Segmentation link - Ghost segment](#)

4. Insufficient segmentation

Symptoms: all your emails have a similarly poor rate

Sending the same message to your subscribers (regular buyers) and your ghosts (inactive for 6 months) dilutes relevance. Each segment has its own motivations and responds to different messages.

Solution : Use Presta's 4 behavioral segments (Unsubscribed, Active, At risk, Dormant, Ghost) to target each week. The impact is immediate.

[Segmentation link - Targeted campaigns](#)

5. Insufficient...

The screenshot shows the PrestaShop administration interface. The top navigation bar includes links for Quick Access, Search, View more, and Log out. The left sidebar contains various menu items like Dashboard, Orders, Catalog, Customers, Customer Service, Sales, Reports, Modules, Design, Shipping, Payments, Internationalization, News, and Configurable modules. The main content area is titled 'Configure' and 'Newsletter Email Suite'. It features three tabs: 'Translations tab - general_test.html', 'List fatigue', and 'Insufficient segmentation'. The 'List fatigue' section describes symptoms such as gradual decline over several weeks or months, and provides solutions like reducing email frequency and excluding ghosts from campaigns. The 'Insufficient segmentation' section notes symptoms like similar poor rates across segments and suggests creating behavioral segments. A green box at the bottom indicates best practices for sending emails.

Configure

Newsletter Email Suite

- Translations tab - general_test.html
- List fatigue
- Insufficient segmentation

Symptom: gradual decline over several weeks or months

If you send the same type of email to the same audience too often, recipients become desensitized and stop engaging. This is natural and becomes irreversible beyond a certain threshold. The Ghost segment starts to grow.

Solution : Reduce size and frequency; exclude ghosts from your campaigns, vary content. Newsletter's condition system prevents over-saturation automatically.

Segmentation tab - Ghost segment

Symptom: all your emails have a similarly poor rate

Sending the same message to your subscribers (regular buyers) and your ghosts (inactive for 6 months) dilutes relevance. Each segment has its own motivations and responds to different messages.

Solution : Use Presta's 3 behavioral segments (Active/Inactive, Active, At risk, Dormant, Ghost) to target each week. The impact is immediate.

Segmentation tab - Targeted campaigns

Missing SPF, DKIM or DMARC

Symptoms: low open rates despite well crafted subject lines

Without SPF, your domain may be penalized. Without DKIM, your emails may go through spam filters. Without DMARC, you have no domain protection policy. These 3 DNS records are non-negotiable to land in the primary inbox.

Solution : The registration email kit generates the exact DNS records to copy paste at your hosting provider or domain registrar.

Segmentation tab - Emails registration suite

Best practice: send them if it rains once a month, limit email reaches on the market after no diagnostic tools — Store centralizes them all in the Statistics tab.

41. Catalogue of 117 email templates

Neria includes 117 HTML + plain text templates in 19 languages, organised into 7 categories.

41.1 PrestaShop transactional emails (redesigned)

- order_conf, payment, shipped, delivered, in_transit, password, newsletter, account, guest_tracking_info, return_slip, log_alert, reply_msg, and all standard PrestaShop templates.

41.2 Behavioural emails

- birthday, first_anniversary, relationship_anniversary, abandoned_cart_1/2/3, checkout_abandonment, post_purchase_care, post_purchase_review, reorder_reminder, win_back, ghost_cart, order_shipped_delay, milestone_order, refund_processed, return_received, refund_reconciliation_1/2/3.

41.3 Luxury & experience emails

- artisan_message, bespoke_ready, care_certificate, certificate_provenance, concierge_followup, craftsmanship_update, personal_shopper_intro, private_invitation, unboxing_guide, white_glove_apology, alteration_update, repair_completed, repair_request_confirm, packaging_choice.

41.4 Loyalty emails

- loyalty_tier_upgrade, loyalty_recap, loyalty_reward_expiry, look_completion, collection_completion, waitlist_available, wishlist_reminder.

41.5 Calendar emails

- christmas, new_year, valentine, mothers_day, fathers_day, grandparents_day, halloween, black_friday, eid_al_fitr, eid_al_adha, ramadan, diwali, lunar_new_year, hanukkah, easter, labor_day, womens_day, and variants.

41.6 B2B emails

- corporate_order_confirm, quote_expiry_48h, quote_expiry_day, quote_extension_offer, product_lifespan_reminder.

41.7 Neria system emails

- neria_fallback (fallback email), log_alert (Watchdog alert), monthly_report_merchant, vip, early_access, exclusive_preview, private_sale, customs_alert, delivery_attempt_failed, extended_warranty, gift_guarantee, tax_refund_eligible.

42. Frequently asked questions

Emails are not being sent — what should I check?

- Help tab → Watchdog log: a failure is always logged there.
- Verify that your licence is active (green banner in any Neria tab).
- Check PrestaShop's SMTP configuration (Advanced parameters → Email): Neria does not send emails itself — it relies on PS's native sending mechanism.
- Test sending from Advanced parameters → Email → Send a test email.

Can I customise the text of a specific email?

Yes, from the Translations tab: each template is independently editable, in each of the 19 languages, with a live preview before saving.

A template doesn't suit me — can I disable it?

Yes, via the Template Blacklist feature in the Home tab. Neria then lets PrestaShop handle that send with its native rendering.

How do I customise the automation send time?

Configure the execution time of your server cron. Golden Hour recommendations (Statistics tab) indicate the best time for your customers.

Does the module slow down my store?

No: email rendering is cached in the database and only regenerated upon a real send or configuration change. Automations run as background tasks via cron, never during a visitor's browsing session.

How do I get support?

By email at support@neriasoftware.com (response within 24 business hours) or via PrestaShop Addons → Your account → Help → Neria. Please state the module version (visible in Modules → Neria) and attach an extract from the Watchdog log if available.

43. Support & Business Care

43.1 Technical support

- Email: support@neriasoftware.com
- Guaranteed response time: 24 business hours (Monday to Friday).
- Languages: French and English.

43.2 Business Care — 12 months included

Each Neria licence includes 12 months of Business Care covering:

- Module updates (new features, security fixes, compatibility with new PS versions).
- Technical support by email for installation, configuration, and usage questions.
- Translation database updates (new languages or linguistic corrections).

43.3 Renewal

After 12 months, the module continues to work indefinitely with the installed version. Renewing Business Care is optional and allows you to continue receiving updates and support.

Appendix A — Legal notices

A.1 Module licence

Neria — Luxury Email Suite is distributed under the Academic Free License 3.0 (AFL-3.0), in compliance with PrestaShop Addons requirements.

A.2 Copyright

© 2026 Neriasoftware — All rights reserved. The source code, email templates, translations, and documentation of this module are the exclusive property of their author. Any unauthorised reproduction, distribution, or use is prohibited.

A.3 Third-party fonts used

- Cormorant Garamond, EB Garamond, Lato, Open Sans, Noto Serif JP/KR/SC/TC — Google Fonts, SIL Open Font License.
- Dancing Script, Great Vibes, Sacramento, Pinyon Script — Google Fonts, SIL Open Font License.

A.4 Third-party libraries

- TCPDF — Nicola Asuni, LGPL 2.1+ licence (PDF certificate generation).
- Any other dependencies are listed in the module's composer.json file.

A.5 Personal data
